Experience

R&D Mechanical & Manufacturing Engineer, XP Power – Gloucester, MA **May 2023 – Present**

- Led NPI projects to design and develop RF generators, owning the full-cycle mechanical design (SolidWorks modeling, simulation, prototyping) and DFX of complex electromechanical systems.
- Partnered with global manufacturing and overseas supply chain to lead transfer of 6+ products from New Product Introduction (NPI) to high-volume production at overseas manufacturing plants.
- Created models, selected materials, and performed Engineering analysis (CFD, Thermal) at various load conditions in Flow, designing cooling methods (e.g., cold plates, air paths) to simulate product failure modes.
- Owned hands-on prototype builds in R&D lab, iterated designs through Validation testing (EVT, DVT, PVT), and created test/assembly fixtures to validate design performance and ensure manufacturing efficiency.
- Implemented DFX (DFM, DFA) and defined Critical-to-Function (CTF), leveraging statistical tools and analyzing data to iterate designs, cutting complexity, reducing cycle time, and lowering total build cost by 18%.
- Created and maintained Bills of Materials and mechanical documentation (3D CAD models in SolidWorks, drawings, work instructions), administered ECR/ECOs, and managed in PDM & SAP/S4 HANA.
- Optimized assembly lines by identifying bottlenecks, implementing SPC, LEAN, 6S, driving continuous improvement, and improving cycle time, Units Per Hour (UPH) by 40%, and boosting FAI readiness.
- Led DOE-based investigations, root cause analysis, 8D, and PFMEA to troubleshoot field issues, successfully reducing product failures, increased First Pass Yield (FPY) by 12%, and coordinated CAPA efforts.
- Managed projects cross-functionally with Electrical Engineers, Quality, global supply chain, contract manufacturers, ODMs, providing project management and technical support to facilitate prototype and production builds, improving product development timelines by 15%.

Mechanical Engineer, Siemens Energy (Quest Global) – Olean, NY **Aug 2021 – Apr 2023**

- Developed 3D models and detailed manufacturing drawings for DATUM components using Siemens NX.
- Led the plant transition project by creating work instructions, SOPs and releasing them in Teamcenter.
- Managed projects in the Project Management team, coordinating with SAP to optimize material flow.
- Implemented project management methodologies, including agile scrum management and Kanban, to enhance productivity and streamline reporting processes for client satisfaction

Skills

Software: Siemens NX, CATIA V6, SolidWorks, Solidworks Flow, Creo, SAP, Abaqus, Ansys, AutoCAD, Teamcenter, MATLAB, LabView, Python, C, C++, MS Project, Power Bi, MS Office Suite

Technical Skills: NPI, DFM, DOE, PFMEA, FEA, PDM/PLM systems, GD&T, DFMEA, Six Sigma, Lean, Project Management, Validation Testing.

Education

Stony Brook University, NY – MS in Mechanical Engineering, CGPA: 3.6

Aug 2021

GRIET, Hyd, India – B.Tech in Mechanical Engineering, CGPA: 3.7

May 2017

Projects

- **RF Unit Display Integration & Backward-Compatible Redesign.**
- **Coldplate redesign to reduce cost and improve performance.**
- **Assembly Line Optimization through LEAN — 50% Reduction in Cycle Time.**
- **DFM-Based Magnetic Component Optimization — Enhanced Manufacturability and Production Efficiency.**
- **Impedance Control Under Uncertainty about Environment Properties.**
